**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by McGrane (Des. 302,420).

McGrane (Figures 1-8) shows a connector comprising an elongated central body with a central longitudinal bore for insertable attachment of a transformer stud and an elongated conductor accommodating body extending along the central body in step-wise fashion above and below the body in side-by-side relationship and having a plurality of conductor insertion apertures spaced along the length of the body so as to be longitudinally coextensive with the bore of the body. The central body has a plurality of screw receiving apertures in communication with the longitudinal bore. The conductor accommodating body also has a plurality of screw receiving apertures in communication with conductor insertion apertures. The connector has an additional elongate conductor accommodating body extending along the central body in side-by-side relationship with a plurality of spaced apart additional conductor receiving apertures and screw receiving apertures. The conductor receiving apertures in the conductor accommodating body and the addition conductor accommodating body face in the same direction. The conductor accommodating body and the addition conductor

accommodating body are on opposite sides of the central body, face in the same direction.

### ***Response to Arguments***

3. Applicant's arguments filed 9/9/08 have been fully considered but they are not persuasive. McGrane (Figure 7) clearly shows an elongated central body with a central longitudinal bore. McGrane (Figures 3, 7, 8) clearly shows an elongated conductor accommodating body extending in stepwise fashion above and below the central body. McGrane (Figures 1, 5, 8) clearly shows an elongated conductor accommodating body with a plurality of apertures coextensive with the longitudinal bore of the central body. The figures are self-explanatory and do not require description for such a simple structure.

### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
